PROFILE

Full Stack Developer with 1+ year of production experience building multi-tenant SaaS products. Shipped RBAC systems, AI-powered form generation via LLM APIs, and configurable data workflows at Innover Labs using React, TypeScript, Node.js, and Firebase. Comfortable across the stack — from Firestore data modeling to prompt engineering for structured LLM outputs. Actively seeking full-stack or frontend-leaning roles.

EDUCATION

Ness Wadia College of Commerce
Bachelor of Computer Applications (BCA)

Pune, Maharashtra
CGPA: 8.5 | 2021 – 2024

EXPERIENCE

Full Stack Developer

Innover Labs

March 2025 – Present

Pune, Maharashtra (On-site)

- Built a configurable form builder for a multi-tenant ERP, enabling orgs to define custom data schemas, workflows, and UIs without code changes — using React, TypeScript, and Firestore.
- Designed and implemented RBAC for users and user groups, scoping access at the form and form-group level across tenant boundaries.
- Integrated AI-powered form generation via Firebase Cloud Functions and OpenRouter LLM APIs; engineered prompts for reliable structured JSON output at scale.

Frontend Development Intern

InternPixel

March 2024 – April 2024

Bengaluru, Karnataka (Remote)

- Built responsive React UI components for client projects; created Figma prototypes and translated designs into production-ready code with the frontend team.

PROJECTS

DexERP | *React, TypeScript, Firebase, Node.js, OpenRouter LLM API*

Innover Labs

- Production multi-tenant ERP platform with a no-code form builder, RBAC, and AI-assisted form generation — core contributor across the full stack from schema design to UI.
- Implemented tenant-scoped Firestore query patterns and structured LLM prompt pipelines via Cloud Functions to generate form configs from natural language input.

KhataBuddy | *React Native, Expo, Firebase, NativeWind, TypeScript*

In Progress

- Cross-platform group expense splitting app built with AI-assisted development (Claude Code, Cursor); features real-time Firestore sync and per-user debt settlement tracking.
- Designed a normalized debt graph to minimize settlement transactions across group members; implemented offline-first state reconciliation with Firestore.

Natours | *Node.js, Express.js, MongoDB, REST API*

[GitHub](#)

- RESTful tour booking API with MVC architecture, JWT auth, role-based authorization, advanced querying (filtering, sorting, pagination), rate limiting, and input sanitization.

TECHNICAL SKILLS

Languages: JavaScript (ES2022+), TypeScript, SQL, Python, Rust (learning)

Frontend: React, Next.js, React Native (Expo), Tailwind CSS, shadcn/ui, Material UI

Backend: Node.js, Express.js, Firebase Cloud Functions, REST API design

Databases & BaaS: Firestore, PostgreSQL, MongoDB, Supabase

AI & LLM: OpenRouter, LLM API integration, prompt engineering, structured JSON output

Tools & Practices: Git, Docker, Prisma ORM, Figma, Claude Code, Cursor IDE, RBAC, multi-tenant architecture
